

Thoughts on Impact

- $\text{Impact}(Q, A) = \text{ImportanceOfProblem}(Q) * \text{QualityofSolution}(A)$
 - $\text{QualityOfAnswer}(A): [0, 100/100]$, thus
 - $\text{Impact}(Q, A) \leq \text{ImportanceOfProblem}(Q)$
- Interactive impact:
 - Make $\text{Impact}(P_1, \dots, P_k) \geq \text{Impact}(P_1) + \dots + \text{Impact}(P_k)$
 - This is possible if P_1, \dots, P_k form a coherent story (together they enable something bigger)
- Suggestions:
 - Think big → maximize $\text{ImportanceOfProblem}$
 - Solve synergistic problems → maximize interactive impact
 - Strive for BEST solution → maximize QualityofSolution
