

Clicker Question

How do lithium, fluorine, and cesium compare with regard to attraction for an electron in a shared bond?

a) $\text{Li} > \text{Cs} > \text{F}$

b) $\text{F} > \text{Cs} > \text{Li}$

c) $\text{F} > \text{Li} > \text{Cs}$

d) $\text{Li} > \text{Cs} > \text{F}$

e) $\text{Cs} > \text{F} > \text{Li}$
