

New Technologies Unlikely to be Understood

Another technology (ML-based): face recognition

Phones allow it now for unlocking.

My Mom got a new phone.

At 83, between vision and motor control, she kept missing the (non-tunable!?) 5-second password timeout to unlock.

My daughter set up face recognition—told me that my Mom had tried it and succeeded.

But when Mom tried it in front of me, it failed.

Success rate? 70% maybe?

What if she's wearing a mask?
