

Good Functions Provide Both Properties

With more effort, we can find a function that gives better behavior and a 256-long cycle:

$$H(x) = \text{floor} [(1279 x + 263) / 8] \text{ mod } 256$$

H(x) generates pretty good random numbers for games—I still don't recommend it for gambling: 256 is tiny for computers.
