Applying MLE in Casino: Watch and Learn

In casinos, for example…

- **people think** that slot machines pay at different rates.

- **One machine may pay more** money more **often** than another.

- So they **stand and watch** other people play.

If one machine pays **10 times out of 100** plays, and a second machine pays **5 times out of 100** plays, the person then sits down at the first machine.
