

No One Waits for a Full Video Transfer

When browsing, have you ever waited 10-50 seconds for a video to play?

Probably not.

A **4K high-definition video** typically **requires** about **2.5 MB (20 Mbits) per second** of video.

That's 4K Ultra HD: for comparison, our class' first lecture recording requires only **35 kB (0.3 Mbits)** per second of video.
