

Your Shell as a Web browser

1. Telnet to your favorite WWW server:

```
telnet www.google.com 80
```

Opens TCP connection to port 80 (default http server port) at www.google.com
Anything typed in sent to port 80 at www.google.com

2. Type in a GET http request:

```
GET /index.html
```

Or

```
GET /index.html HTTP/1.0
```

By typing this in (may need to hit return twice), you send this minimal (but complete) GET request to http server

3. Look at response message sent by http server!

What do you think the response is?
