

What could go Wrong?

- Process fails
 - Majority does not include it
 - When process restarts, it uses log to retrieve a past decision (if any) and past-seen ballot ids. Tries to know of past decisions.
- Leader fails
 - Start another round
- Messages dropped
 - If too flaky, just start another round
- Note that anyone can start a round any time
- Protocol may never end – tough luck, buddy!
 - Impossibility result not violated
 - If things go well sometime in the future, consensus reached
