2. Inconsistent Retrieval Problem

Transaction T1

x = getSeats(ABC123);

y = getSeats(ABC789);

write(x-5, ABC123);

// ABC123 = 5 now

write(y+5, ABC789);

commit

Transaction T2

x = getSeats(ABC123);

y = getSeats(ABC789);

print("Total:" x+y);

// x = 5, y = 15

commit

// Prints "Total: 20"

At Server:
ABC123 = 10
ABC789 = 15

**T2's sum is the wrong value!
Should have been "Total: 25"**

25
