

Pregel System By Google

- Pregel uses the master/worker model
 - Master (one server)
 - Maintains list of worker servers
 - Monitors workers; restarts them on failure
 - Provides Web-UI monitoring tool of job progress
 - Worker (rest of the servers)
 - Processes its vertices
 - Communicates with the other workers
- Persistent data is stored as files on a distributed storage system (such as GFS or BigTable)
- Temporary data is stored on local disk
