

How DRF Works

- Our example
 - Job 1's tasks: 2 CPUs, 8 GB
 - => Job 1's *resource vector* = <2 CPUs, 8 GB>
 - Job 2's tasks: 6 CPUs, 2 GB
 - => Job 2's *resource vector* = <6 CPUs, 2 GB>
- Consider a cloud with <18 CPUs, 36 GB RAM>
