

Vanilla DFS: Directory Service API

- *file_id* = lookup(*dir*, *file_name*)
 - *file_id* can then be used to access file via Flat file service
- add_name(*dir*, *file_name*, *buffer*)
 - Increments reference count
- un_name(*dir*, *file_name*)
 - Decrements reference count; if =0, can delete
- *list*=get_names(*dir*, *pattern*)
 - Like ls -al or dir, followed by grep or find
