

Frame for `is_prime` (Before Call to `divides_evenly`)

Let's see the stack frame.

Our `divides_evenly` Function for Checking Division

`is_prime` calls `divides_evenly`:

```
int32_t divides_evenly
(
    int32_t divisor,
    int32_t value
)
{
    int32_t multiple;
    // ... code / doesn't matter to us
}
```

Annotations in the code:

- `int32_t divisor, int32_t value` are annotated as "two parameters".
- `int32_t multiple;` is annotated as "one local variable".
