Hierarchies of Structures

1

Bibliographies Reference Many Types of Documents

What if we have a large group of inter-related types?

For example, documents in a bibliography.

For each document, we have a reference.

But some documents are papers, while others are books.

Some papers are conference papers, while others are journal papers.

And some books are textbooks, while others may be part of a series.

2

Type Hierarchy Implies Structural Inclusion Relations

The basic type is a `reference_t`.

It has an `author_list`, a `title`, and a `year` of publication.

```
double_list_t
prev, next
```

To organize references, we include a `double_list_t` (at the start of the `struct`).

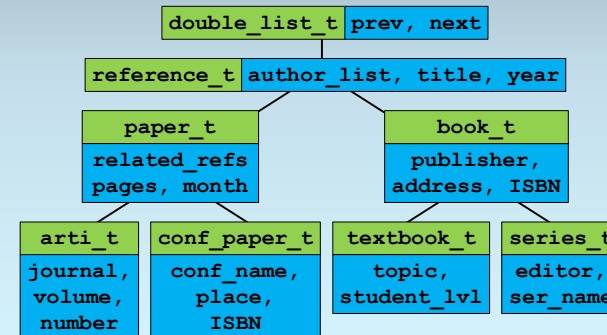

```
reference_t
author_list,
title, year
```

The reference is shown as a child or sub-type of the `double_list_t`.

The result is called a **type hierarchy** (or, in other languages, a **class hierarchy**).
