## Definition

Choose and fix  $n \in \mathbb{N}$ . Define  $\sim_n$  on  $\mathbb{Z}$  by

$$x \sim_n y \iff x \equiv y \pmod{n}$$
.

Proved many times....

 $\sim_n$  is an equivalence relation.

Equivalence classes

$$[r] = \{x \in \mathbb{N} : x \equiv r \pmod{n}\}$$
$$= \{x \in \mathbb{N} : n | (x - r)\}$$
