

# Sick Act

You measure your body temperature with a thermometer calibrated in Kelvin. What do you hope the reading is (assuming you are not trying to fake some sort of illness) ?

A. 307 K

B. 310 K ← correct

C. 313 K

D. 317 K

$$F=98.6$$

$$C=\frac{5}{9}(F-32)=37$$

$$K=C+273=310$$
