Calculation

Light is incident on two linear polarizers and a quarter wave plate (QWP) as shown.

What is the intensity I_3 of the light after the 60° polarizer?

A)
$$I_3 = I_1$$

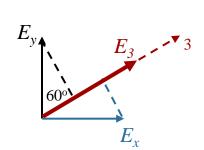

B)
$$I_3 = \frac{1}{2} I_1$$

C)
$$I_3 = \frac{1}{4} I_1$$

$$E_3 = \frac{E_1}{\sqrt{2}}$$

$$I \propto E^2$$

$$E_3 = \frac{E_1}{\sqrt{2}} \qquad I \propto E^2 \qquad \longrightarrow \qquad I_3 = \frac{1}{2}I_1$$

NOTE: This does not depend on θ !
