## Calculation

A capacitor is constructed from two conducting cylindrical shells of radii  $a_1$ ,  $a_2$ ,  $a_3$ , and  $a_4$  and length  $L(L >> a_i)$ .

What is the capacitance *C* of this capacitor?

$$C \equiv \frac{Q}{V}$$

 $a_2 < r < a_3$ : What is E(r)?

B) 
$$\frac{1}{4\pi\varepsilon_o}\frac{Q}{r^2}$$

B) 
$$\frac{1}{4\pi\varepsilon_o} \frac{Q}{r^2}$$
 C)  $\frac{1}{2\pi\varepsilon_o} \frac{Q}{Lr}$  D)  $\frac{1}{2\pi\varepsilon_o} \frac{2Q}{Lr}$  E)  $\frac{1}{4\pi\varepsilon_o} \frac{2Q}{r^2}$ 

D) 
$$\frac{1}{2\pi\varepsilon_o} \frac{2Q}{Lr}$$

$$\mathsf{E})\frac{1}{4\pi\varepsilon_o}\frac{2Q}{r^2}$$

Why?

Gauss' law: 
$$\int \vec{E} \cdot d\vec{A} = \frac{Q_{enclosed}}{\mathcal{E}_o}$$

Gauss' law: 
$$\int \vec{E} \cdot d\vec{A} = \frac{Q_{enclosed}}{\varepsilon_o} \longrightarrow E \cdot 2\pi r L = \frac{Q}{\varepsilon_o} \longrightarrow E = \frac{1}{2\pi\varepsilon_o} \frac{Q}{Lr}$$

Direction: Radially In
